Roger,

Find enclosed couple of
pressings from recent
purchases of type 1794
NACF CENTS. Do not think
these are near census but
you keep track of choice
specimens and these are
way above average for 1794's
Color and surfaces of 2a
are not superb but detail
is probably XF for sure
maybe better; 4 is lovely
brown, some minute corrosion
on obverse and reverse is
superb light brown and

flawless probably close to
VF30. Will probably be
at Metropolitan Show
if you make it check for
me by asking at Colony
Coin's (Newtonville, Mass.)
table - if I go will be
at Auction for LC's
Friday 6:30 but probably
leaving as soon as LC section
over. Hope to see you
will try to remember to
bring 1794's for your
inspection.

Sincerely,

~ Bill ~

P.S. Have a client for a choice
Clean brown 1793 Half Cent for type
F12-VF30 range if you have
any dyes for sale.
